

Irrawaddy River Ambush — Motion Graphics Voiceover Script

Total runtime: ~42 minutes
Read rate: ~140 words/minute
Format: [ANIM:] = motion graphics cue | [SFX:] = optional sound | [PAUSE:] = beat

Composition IDs in [ANIM:] match Remotion exports in remotion/.

Production note (full VO + rough cut)

This script is **record-ready** as a single pass. Quantities use digits (40 hexes, EAL 12, 15%) — pronounce **zero-one** for a d100 roll of 01; **ought/oh** for leading zeros in roll callouts if you prefer broadcast style (e.g. roll oh-eight for 08). Lay the full VO in your NLE first, then swap Remotion exports section by section. Phoenix Command numbers (EAL, odds, rolls, PEN/DC) match `scenario.ts` and `node scripts/log-beats.mjs`. Tactical map visuals use `river-graphic.png` and `boat.png`; narration hex ranges describe the **abstract kill zone**, not literal pixels on the artwork.

ACT 1 — COLD OPEN (0:00 – 4:30)

SC-001 · 0:00 – 0:45

[ANIM: FR-001 IrrawaddyIntro – river drift, three raft heat signatures, jungle bank pulse. Layer: hybrid. No UI yet.]

VO:
July 1944. Northern Burma. The monsoon has turned the Irrawaddy into a brown highway of current and mud — and for the Japanese 15th Army, it is one of the last ways out.

[ANIM: Current arrows animate downstream. Raft tokens drift at 2.5 knots.]

Allied forces under General Joseph Stilwell are closing on Myitkyina. The airfield there would unlock the China-Burma-India theater. Every day the Japanese hold it, supplies and reinforcements flow over the Hump. Every day they lose it, the retreat becomes a rout.

[ANIM: FR-002 title card – line 1 slams, line 2 phosphor, subtitle fades.]

But the Allies are not alone on this river.

[ANIM: Jungle bank left – hidden squad icons pulse once at 30% opacity, then vanish.]

In the jungle along the bank, men who have lived in this terrain their entire lives lie waiting — trained by the Office of Strategic Services, armed with American Thompsons, M1 Carbines, BARs, and British Bren guns, instructed to kill quickly and vanish before the enemy can respond.

This is the Irrawaddy River ambush. And today, we are going to fight it twice: once as history happened... and once as Phoenix Command calculates it, shot by shot, wound by wound, second by second.

[ANIM: FR-003 – hard cut. Phase clock slams: PHASE 1 IMPULSE 1.]

[SFX: Single low tone – phase advance]

SC-002 · 0:45 – 2:30

[ANIM: FR-010 HistoricalMap base – Burma outline draws on. Layer: HISTORICAL MODE.]

VO:
Before we roll a single die, you need to understand what was at stake.

[ANIM: FR-011 – Stilwell advance arrow animates Ledo to Myitkyina.]

The Myitkyina campaign was the pivot of the CBI theater in the summer of 1944. Lieutenant General Joseph Stilwell's multi-national force — Chinese divisions, Merrill's Marauders, British and Indian units, and American logistics — was grinding north through some of the worst terrain on earth. The objective: Myitkyina, and its airfield.

[ANIM: FR-012 – Japanese retreat route along Irrawaddy, dashed crimson.]

The Japanese 15th Army, including battered elements of the 18th and 56th Divisions, was under crushing pressure. By June, the 18th Division — once elite — may have been reduced to a few thousand effectives. Disease, starvation, and combat attrition had hollowed them out.

They still had to move. Roads through the Burmese jungle were almost nonexistent. Fuel for motor transport was scarce. Aircraft were reserved for emergencies. So they used the river.

[ANIM: FR-013 – OSS Det 101 zones appear in Kachin hills.]

And waiting for them in those hills were the Kachin Rangers of OSS Detachment 101.

SC-003 · 2:30 – 4:30

[ANIM: FR-015 archival photo Ken Burns – Kachin fighters. Duotone treatment.]

VO:
Detachment 101 was America's experiment in fighting a jungle war without fighting it like conventional infantry. The Office of Strategic Services recruited Kachin tribesmen — expert fighters with intimate knowledge of every ridge, stream, and trail — and trained them in modern weapons, demolitions, and ambush tactics.

[ANIM: Caption overlay: "OSS Detachment 101 — northern Burma, 1944"]

The CIA's own historical account confirms river ambushes against troop-carrying rafts as standard operating procedure during the Myitkyina campaign. Army Special Operations history documents the weapons: M1A1 Thompsons, Bren guns, M1919 machine guns — supplied by air drop. Recent research on Detachment 101 supply adds the M1918A2 Browning Automatic Rifle and the M1 Carbine — lighter for jungle movement, still lethal on the river.

This scenario is not invented. It is assembled from primary sources: campaign studies, intelligence histories, and the operational records of guerrilla warfare in the Irrawaddy valley.

[ANIM: FR-014 Myitkyina marker pulses. Quote fades bottom-left.]

Myitkyina would fall on August 3, 1944. Ambushes like the one we are about to simulate helped starve the garrison of men and morale long before the final assault.

[PAUSE: 1s]

Now — let me show you the battlefield.

ACT 2 — THE SCENARIO (4:30 – 16:00)

SC-010 · 4:30 – 7:00

[ANIM: FR-020 Order of Battle split screen. Layer: HYBRID MODE.]

VO:
Here is the fight as the scenario document lays it out.

On paper, the Kachin field between 50 and 100 guerrillas in 2 to 4 squads. For our simulation — and for what you will see on screen — we use 4 squads totaling 18 fighters. That is enough to resolve every weapon type accurately without drowning in dice rolls.

[ANIM: Squad icons Alpha Bravo Charlie Delta appear on near bank.]

Squad Alpha — led by an OSS officer we'll call Lieutenant Carter — holds the center. Carter carries a BAR. One Bren gunner backs him up. 2 M1 Carbines and a Thompson round out the squad. Their job is sustained fire at about 120 hexes — 220 meters — to the river lane.

Squad Bravo — Naw San's Kachin fighters — holds the close bank. 40 hexes — about 73 meters — to the lead raft. 3 Thompsons and 2 M1 Carbines. They will hurt the lead raft first.

[ANIM: Charlie and Delta icons.]

Squad Charlie is the machine-gun section — M1919 A6 on a bipod, plus a second automatic rifle team with another BAR and a Bren, a Thompson, and a carbine for the river lane.

Squad Delta is the flank guard and withdrawal element — 3 M1 Carbines and 1 Thompson. They do not fire in the opening volley. They will cover the retreat when the whistle blows.

[ANIM: Three raft tokens deploy upstream on river center.]

Facing them: 3 bamboo rafts carrying 30 Japanese soldiers from the 15th Army — likely remnants of the 18th Division. 10 to 12 men per raft. Rifles, a light machine gun on each lead element, low morale, no cover.

SC-011 · 7:00 – 10:30

[ANIM: FR-021 through FR-026 weapon cards sequence — 2s each. ForcesInfographic composition.]

VO:
Let me walk you through the weapons, because Phoenix Command models each one individually — weight, rate of fire, penetration, damage class, aim time modifiers — all of it matters.

[ANIM: FR-021 Thompson card slides in.]

The M1A1 Thompson — we use the Phoenix Command profile for the M1928A1 in .45 ACP. At 40 hexes — about 73 meters — penetration 1.3, damage class 2. Not a precision instrument. A volume-of-fire instrument. 600 rounds per minute. In an ambush at close river range, that is exactly what you want.

[ANIM: FR-022 Bren card.]

The Bren Mk 1 in .303 British. At 120 hexes — 220 meters — penetration 13, damage class 7. That is lethal. The Bren is the weapon that keeps Japanese heads down while the Thompsons close the distance. Bipod mounted, hard cover on the bank, 6 Actions of aim before the trigger — we will calculate that shot in full.

[ANIM: FR-023 M1919 card.]

The M1919 A6 — the American medium machine gun. At 200 hexes, penetration 13, damage class 7, same band as the Bren but from a weapon that can enfilade the entire river. In monsoon wet, there is a 1% jam chance per Phase — roll zero-one on d100. We will roll for it.

[ANIM: FR-024 BAR A2 card.]

The M1918A2 Browning Automatic Rifle — we model it as BAR A2 in .30-06. At 120 hexes, penetration 15, damage class 7. 20-round magazine, bipod fire, the American answer to a light machine gun in the jungle. Carter will fire this one on screen.

[ANIM: FR-025 M1 Carbine card.]

The M1 Carbine in .30 Carbine. At 40 hexes on the close bank, penetration 5.8, damage class 5 — more punch than a Thompson, lighter than a Garand. Almost half our 18 fighters carry one. On withdrawal, at 180 hexes, penetration drops to 2.4 — but a lucky hit still stops pursuit.

[ANIM: FR-026 Arisaka card.]

The Japanese carry Type 99 Arisaka rifles — 7.7 mm bolt-action. At 200 hexes they can still kill you. But on a rocking bamboo raft, firing at concealed muzzle flashes across hundreds of meters of open water? Phoenix Command will show you exactly how unlikely that is.

[ANIM: FR-027 loadout donut chart builds.]

28% Thompsons. 44% M1 Carbines. 11% Bren guns. 11% BAR teams. 6% on the M1919 crew. The Japanese are 70% rifle, 1 or 2 light machine guns per raft, and zero cover.

SC-012 · 10:30 – 13:00

[ANIM: FR-028 raft cross-section. FR-029 terrain cross-section side view.]

VO:
The terrain is the Kachin Rangers' greatest weapon.

[ANIM: Hard cover shield icon on near bank — "+ jungle hard cover"]

The near bank: steep muddy slopes 1 to 2 meters high, dense teak and bamboo, hard cover for shooters using Fire Over and Around rules. The Kachin start hidden. The Japanese cannot target what they cannot see.

The river: historically 800 to 1500 meters wide at the Myitkyina section during monsoon flood. Our on-screen map uses a painted Irrawaddy channel — beautiful, but still a **compressed kill zone** for Phoenix Command, not a one-to-one survey. Simulation ranges — 40 hexes, 120 hexes — are the truth for the dice; the artwork shows where the ambush sits on the water. The narration tells the history; the map shows the fight we can resolve shot by shot.

[ANIM: Monsoon rain overlay. Visibility band beyond 200 hex dims.]

Monsoon rain reduces visibility beyond 200 meters. The current runs 2 to 4 knots, pushing rafts downstream at roughly 0.5 hex per Impulse — about 2.5 knots.

The far bank: sparse vegetation. If a raft beaches there, survivors get cover — but reaching it alive is the problem.

SC-013 · 13:00 – 16:00

[ANIM: Victory conditions two-column card.]

VO:
Victory conditions.

The Kachin win a major victory by destroying 75% of the rafts or eliminating 75% of the troops — that is 23 of 30 soldiers, or 2 of 3 rafts sunk. A minor victory is 50%. Bonus points for intelligence recovered from bodies — historically, OSS teams searched downstream casualties for documents.

The Japanese win by getting rafts out with half their men alive. 75% for a major victory.

[ANIM: Text overlay: "Historically, this scenario favors the ambushers. Phoenix Command will quantify by how much."]

This scenario favors the ambushers. That is historically accurate. The question is not who wins — it is how brutally the system quantifies the cost, second by second.

[PAUSE: 1.5s — transition wipe to simulation palette]

ACT 3 — PHOENIX COMMAND PRIMER (16:00 – 22:30)

SC-020 · 16:00 – 18:00

[ANIM: FR-030 Phase timeline. PhoenixPrimer composition. SIMULATION MODE.]

VO:
If you have never played Phoenix Command, this next section is your entire ruleset for the video.

Phoenix Command is a small-arms combat simulation published in the 1980s and still unmatched in granularity. It treats combat not as hit points and modifiers, but as physics, anatomy, and human reaction time.

[ANIM: FR-030 — one Phase bar divides into 4 Impulse segments, 0.5s each labeled.]

Time is measured in Phases. 1 Phase equals 2 seconds of real time. Each Phase divides into 4 Impulses of 0.5 second. Everything happens simultaneously within an Impulse — all shooters fire, all bullets fly, all wounds are checked.

[ANIM: FR-031 Combat Actions bar for Carter — 2-1-1-1.]

Every character has Combat Actions per Phase — derived from Strength, Agility, Intelligence, skill level, and encumbrance. Lieutenant Carter, a Crack soldier, has 5. That is 2 Actions in Impulse 1, 1 in Impulse 2, 1 in 3, 1 in 4 — Table 1-E.

Moving 1 hex costs 1 Action. Assuming a firing stance costs 2. A snap shot uses 1 Action of aim-and-fire combined — you do not aim for 1 Action and shoot on a

second. Automatic weapons fire 1 burst per Impulse maximum.

Unused Actions are lost. Combat is wasteful and frantic.

SC-021 · 18:00 – 20:30

[ANIM: FR-032 empty EAL panel. FR-033 populates row by row. EALDemo composition.]

VO:

When someone shoots, we calculate the Effective Accuracy Level — the EAL.

[ANIM: Each modifier row slides in with stagger — see style guide 80ms.]

Each factor contributing to accuracy is an Accuracy Level Modifier — an ALM. Add them together.

Aim Time plus Skill Accuracy Level — how long you aimed and how good you are. Range — farther is harder. Movement — targets and shooters both. Situation and stance — bipod mounted, hip fire, kneeling braced. Visibility — monsoon haze. Target size — a standing man on an open raft is a large target for burst elevation; a head looking over hard cover is a small one.

For automatic fire, subtract the weapon's SAB — sustained automatic burst penalty.

[ANIM: EAL total counts up. Odds ring fills. FR-034.]

The sum is clamped between -10 and +28. Cross-reference Table 4-G — the Odds of Hitting. That gives a percentage.

Roll 2 ten-sided dice as a 0 to 99 number. Less than or equal to the odds — hit. Greater — miss.

[ANIM: FR-035 dice lock at 22. HIT flashes green.]

That is the core loop. Everything else is consequence.

SC-022 · 20:30 – 22:30

[ANIM: FR-037 hit location silhouette. FR-038 KV gauge.]

VO:

On a hit, roll hit location. Cross-reference Penetration against Effective Protection Factor. Raft troops have no armor — EPF 0. Look up Physical Damage on Table 6-A.

Physical Damage measures wound severity — from superficial to instantly fatal. A thigh flesh wound might be 3 PD. A heart hit might be 4000.

[ANIM: PD counter ticks up on silhouette.]

Each Impulse a character takes damage, check incapacitation. Compare total Physical Damage to Knockout Value on the Knockout Table. That gives an Incapacitation Chance — a percentage. Roll d100. If the roll is less than that chance, you fail — shock casualty, out of the fight. If the roll is equal or higher, you keep going.

[ANIM: KV gauge — PD 56 vs KV 35, IC 25%, roll 18, FAIL.]

Veterans and recruits die the same way. Phoenix Command is honest about that.

[ANIM: Brief code scroll — phoenix-functions effectiveAccuracyLevel, oddsOfHitting, hitDamage — monospace on dark.]

I built the lookup engine in JavaScript — phoenix-functions — so every number you see on screen matches the rulebook tables exactly. No fudging. When the EAL panel says 43% for Carter's BAR burst, that is Table 4-G.

[PAUSE: 1s]

ACT 4 — TACTICAL SETUP (22:30 – 28:00)

SC-030 · 22:30 – 25:00

[ANIM: FR-040 TacticalSetup — full map, hidden squads, three rafts. HYBRID MODE.]

VO:

Here is our battlefield at the moment before the ambush.

[ANIM: Squad positions highlight one by one with range arcs to river center.]

Alpha — center bank, 120 hexes to the lead raft. Carter's BAR and the Bren gunner have been aiming for 6 Actions before the clock starts. That is the surprise rule: the Kachin begin with prepared fire; the Japanese do not get to shoot during Phase 1 at all.

Bravo — 40 hexes to the lead raft. Naw San's Thompsons on snap fire.

Charlie — the M1919 200 hexes back, bipod on hard cover, enfilade across the entire river lane.

Delta — in trail. Silent. Waiting.

[ANIM: FR-043 range bands overlay — close medium long.]

3 rafts enter from upstream. 12, 10, and 8 men. Green troops, skill level 2 on average, knockout values around 10. They are drifting at 0.5 hex per Impulse into a kill zone designed by people who have been hunting this jungle since childhood.

SC-031 · 25:00 – 27:00

[ANIM: FR-041 Carter character card. FR-042 Yamada card.]

VO:

Two men represent the fight.

Lieutenant Carter — OSS advisor. Skill Level 5, Skill Accuracy Level 11, 5 Combat Actions, Knockout Value 35. Weapon: BAR A2. Pre-aimed 6 Actions. Bipod mounted behind jungle hard cover.

Private Yamada — on the lead raft. Skill Level 2, SAL 7, 4 Combat Actions, Knockout Value 10. Weapon: Arisaka Type 99. No cover. Standing on bamboo that someone else is about to shoot.

[ANIM: FR-044 Surprise Rule card stamps on screen.]

Special rule: surprise. Phase 1 belongs to the Kachin. If Yamada survives it, he can fire back in Phase 2. That is a very large if.

SC-032 · 27:00 – 28:00

[ANIM: Phase clock ticks to Phase 1 Impulse 1. All weapons READY indicators.]

VO:

Phase 1. Impulse 1.

The ambush begins.

[SFX: M1919 distant — muted, or silence then first burst]

ACT 5 — PLAYTHROUGH (28:00 – 40:00)

SC-040 · 28:00 – 30:00 · BEAT 01

[ANIM: FR-051 Beat-ThompsonVolley — full combat layout. Tracer Bravo to Raft 1.]

VO:

Squad Bravo opens fire — 3 Thompsons and 2 M1 Carbines on the close bank. We resolve 1 representative Thompson burst on screen. The 2 carbines fire in the same Impulse off-camera; we do not roll them separately because this scenario uses 1 EAL per weapon type, not 18 individual dice tracks.

Why the Thompson for the on-screen roll? At 40 hexes, a snap burst from Naw San's M1928A1 gives Effective Accuracy Level 3 and 15% odds. The same snap shot with an M1 Carbine — semi-auto, no burst band — works out to EAL 4 and only 3%. The submachine gun is the right representative for a half-second volley. But when a carbine round does connect at this range, Phoenix Command says penetration 5.8 and damage class 5 — harder hitting per shot than .45 ACP.

One representative Thompson M1928A1 snap burst — standing in for Naw San's 3-gun SMG section — 40 hexes, 73 meters, target Standing Exposed on a drifting raft. Skill Accuracy Level 11. 1 Action of aim. Kneeling and braced behind hard cover.

[ANIM: Optional subtitle on Beat-ThompsonVolley: "+ 2× M1 Carbine @ 40 hex (off-screen volley)".]

[ANIM: EAL panel builds — Beat-ThompsonVolley / beat-01 from scenario.ts.]

Watch the EAL stack build. Aim Time modifier at 1 Action plus SAL. Range ALM at 40 hexes. Movement — raft drifting 0.5 hex per Impulse. Kneeling and braced, +5. Target size for burst elevation — standing exposed, +14. Subtract SAB 3 for burst fire.

Effective Accuracy Level 3. Table 4-G gives 15% odds of hitting.

[ANIM: Dice roll — scripted 12. HIT.]

I roll a 12. 12 is less than or equal to 15 — hit.

At this range, .45 ACP does penetration 1.3, damage class 2. Against unarmored troops, that is enough. We resolve hit location — roll 67 — and Physical Damage.

[ANIM: Three dots on Raft 1 extinguish. Casualty counter 3/12.]

3 soldiers on the lead raft drop in the first half-second. The raft lurches. Scenario rule: 50% chance troops fall in the water on a sustained hit. Roll the die — 4 — 2 more splash overboard.

That is 1 Impulse. 3 more remain in Phase 1.

SC-041 · 30:00 – 32:30 · BEAT 02

[ANIM: FR-052 Phase1Ambush — BAR hero shot. This is the thumbnail frame.]

VO:

Impulse 2. Alpha opens up — Carter's BAR and the Bren gunner in parallel. We resolve Carter on screen.

This is the shot that defines the ambush. Lieutenant Carter, 6 Actions of aim, BAR A2 on bipod, 120 hexes — 220 meters — burst fire at Standing Exposed targets on a raft that cannot duck.

[ANIM: EAL panel — beat-02. Each modifier narrated as it highlights.]

Aim Time at 6 Actions: -6, plus Skill Accuracy Level 11. Range ALM at 120 hexes — significant penalty, but the BAR was built for exactly this. Bipod Mounted Weapon: +3. Target burst elevation: +14. SAB -4.

Effective Accuracy Level 12. Odds of hitting: 43%.

[ANIM: Dice roll — scripted 22. HIT. Damage panel: location, PD, PEN, DC.]

Roll 22. 22 is less than or equal to 43 — hit.

Penetration 15. Damage class 7. Hit location roll 41. Physical Damage — read the panel. That soldier is not getting up.

Table 5-A distributes burst rounds across the raft cluster. Multiple hits. Multiple casualties.

[ANIM: Raft 1 counter 9/12. Sinking indicator begins.]

Raft 1 has lost a quarter of its strength in 2 Impulses. Yamada is still alive. For now.

SC-042 · 32:30 — 34:00 · BEAT 03

[ANIM: FR-053 Beat-M1919. Jam check inset d100=47 CLEAR.]

VO:

Impulse 3. Charlie's M1919 A6 speaks.

200 hexes. 366 meters. Monsoon haze — we could apply a visibility penalty beyond 100 hexes, but today we give the gunner good visibility and let the range ALM do the work.

First: jam check. Wet monsoon, 1% failure per Phase — need a roll of zero-one. Roll d100 — 47. The gun fires.

6 Actions aim. Bipod mounted. Burst at Raft 2. Effective Accuracy Level 7. Odds: 24%.

[ANIM: Dice 18 — HIT. Enfilade tracer across full river width.]

Roll 18. Hit. The M1919 enfilades the river lane. 2 to 4 casualties on the second raft — this is the moment Japanese officers understand they are not conducting a movement, they are surviving an execution.

SC-043 · 34:00 — 35:00 · BEAT 04

[ANIM: FR-054 scatter miss — roll 71, red MISS, splash.]

VO:

Impulse 4. Bravo's second volley — Thompsons and carbines together — at 35 hexes as the current drifts the raft closer. We still resolve the Thompson representative burst. Effective Accuracy Level 3. Odds: 15%.

Roll 71. 71 is greater than 15 — miss. The rounds scatter into the river — Table 5-C — and the half-second is gone.

That is Phase 1 complete. 4 Impulses. 2 seconds of real time. The lead raft is bleeding. The Japanese have not fired a shot.

SC-044 · 35:00 — 37:00 · BEAT 05–06

[ANIM: Phase clock → Phase 2 Impulse 1. FR-055 Phase2ReturnFire.]

VO:

Phase 2. The Japanese may return fire.

Private Yamada grabs his Arisaka. Hip fire from an unstable raft. 200 hexes to a muzzle flash he thinks is Alpha's BAR position. 4 Actions of aim on a bolt-action that needed more time than he has. Target: Fire Over and Around — the Kachin are still largely concealed.

[ANIM: EAL panel beat-05 — low odds.]

The Effective Accuracy Level is -10. Odds of hitting: 0%. Roll 78. Miss.

That is not bad luck. That is physics. The wide river, the jungle cover, the rocking platform, the low skill — Phoenix Command encodes all of it.

[ANIM: FR-056 Raft 2 LMG — sequential EAL panels.]

Raft 2's light machine gunner tries suppression. Hip fire, 130 hexes. Effective Accuracy Level -10. Odds: 1%. Roll 91. Miss.

Suppression in Phoenix Command is not a morale marker — it is the fact that your odds are terrible and you get 1 burst per Impulse while Thompsons keep coming.

SC-045 · 37:00 — 38:30 · BEAT 07

[ANIM: Phase 4. FR-057 morale collapse. KV gauge. PANIC stamp.]

VO:
Phase 4. Raft 1 has crossed 50% casualties.

Scenario rule: survivors must pass a morale check or panic. In Phoenix Command terms, Yamada's Physical Damage total of 18 exceeds his Knockout Value of 10. Incapacitation Chance: 25%. Roll 18 — less than 25 — fail.

[ANIM: Raft 1 SINKING variant. Troops surrender animation.]

The lead raft is sinking. Survivors throw rifles. The fight goes out of them the way water goes out of a punctured hull — fast.

SC-046 · 38:30 – 40:00 · BEAT 08

[ANIM: Phase 10. Whistle icon. Beat-Withdrawal. Squads fade.]

VO:
Phase 10. Lieutenant Carter blows the whistle — standard OSS signal to break contact.

Squad Delta opens covering fire — 3 M1 Carbines on the flank, 1 Thompson in trail. We resolve 1 carbine shot on screen: 6 Actions of aim, 180 hexes, long range for a .30 Carbine round. Effective Accuracy Level 9. Odds: 9%.

Roll 6 — hit. At 180 hexes that is penetration 2.4 and damage class 2 — not the slaughter of Phase 1, but enough to make the survivors on Raft 3 keep their heads down. That is why they do not pursue into the jungle.

[ANIM: Optional subtitle on Beat-Withdrawal: "Delta: 3× M1 Carbine covering fire".]

Alpha and Bravo melt into jungle trails. The Kachin ignore difficult terrain on withdrawal. Japanese survivors paddle for the far bank and do not follow.

[ANIM: FR-059 casualty tracker final: 24/30 Japanese, 2/3 rafts sunk.]

Engagement over. 20 Phases. 6⅔ minutes. 24 Japanese dead or drowned. 2 rafts sunk. 1 Kachin killed, 2 wounded.

Major Kachin victory.

ACT 6 — OUTCOME & EPILOGUE (40:00 – 42:30)

SC-050 · 40:00 – 41:15

[ANIM: FR-060 OutcomeDashboard. FR-061 victory stamp.]

VO:
Let us score it.

Rafts destroyed: 2 of 3. Japanese eliminated: 24 of 30 — 80%. Kachin losses: 1 killed, 2 wounded. Intelligence recovered: 1 document pouch from a body on the waterline — 1 bonus victory point.

Major Kachin victory by every metric in the scenario document.

Phoenix Command told us what history already knew: this fight was never fair. Concealed positions. Automatic weapons. Hard cover. Targets in the open on sinking bamboo.

SC-051 · 41:15 – 42:30

[ANIM: FR-062 epilogue map — Myitkyina falls. FR-063 end card.]

VO:
Detachment 101 and the Kachin Rangers conducted dozens of operations like this across northern Burma. They did not win the war alone — Merrill's Marauders, the Chinese divisions, the RAF and USAAF, and Stilwell's stubborn logistics did that. But they made every mile of the Irrawaddy cost blood.

If you want to run this yourself, the scenario PDF and Phoenix Command rules are linked below. The phoenix-functions code implements every table. Scale down the headcount, compress the river, pre-aim your BAR and Bren teams, and give the Japanese 1 Phase of surprise shock.

[ANIM: End card — title, GitHub link, subscribe.]

Thank you for watching. Roll honestly. Withdraw fast.

And remember — on the Irrawaddy in July 1944, the river belonged to whoever owned the jungle on the bank.

[FADE TO BLACK]

APPENDIX — ALT READS & PICKUP LINES

Use after the rough cut when drilling into individual sections:

- **Rough-cut workflow:** Record full script once → assemble in NLE → mark weak acts → re-record only those SC-### blocks → re-render matching Remotion comps from `remotion/out/`.

Use if re-recording sections:

- **Rules simplification:** "Think of EAL as a skill check target number, and the d100 as your roll-under."
- **Scale disclaimer:** "1 hex equals 2 yards. We show the kill zone, not the full kilometer."
- **Aggregate fire:** "I'm showing one representative roll for the whole squad — that's standard for Phoenix Command at this scale."
